The OPTEG GmbH is an upcoming enterprise who is specialised in development work, manufacturing as well as distribution of high-tech products such as fibre-based optical low coherence interferometers and fibre-based reflectometers, respectively.

Six years ago the OPTEG GmbH started with development work for innovative solutions of controlling systems for highly-dynamic multi-axes motion systems. At present hard- and software components for ion beam figuring/finishing (IBF) machines such as five-axes motion systems, machine controlling systems, user interfaces, data interfaces, and CAM-generation belong to our standard products. Simultaneous product development has been done for highly intelligent power supplies used for operating ion beam sources and offered for a power spectrum ranging from 700 to 1500 Watts.

Since about one year OPTEG finished his development work of a complete IBF machine for figuring large-area optics, to our knowledge the first stand-alone turnkey and production ready IBF machine available according to customer requirements.
