Innolume GmbH is the world-wide leading manufacturer of diode lasers in the operational range from 1064nm - 1320nm. Innolume recently introduced new products of its High Power Lasers product line, amongst them 1064nm, 1210nm and 1320nm fiber coupled modules featuring an output power of up to 100 Watt. The development and manufacturing of diode lasers in the so far uncovered wavelength range 1064nm - 1320nm is enabled by Innolume's proprietary Quantum Dot Technology. Applications range from surgical Lasers-Scalpels, Cosmetic systems, Analytics, Materials Processing and Test & Measurement Equipment. The combination of new wavelengths, high efficiency and small size form factor makes Innolume lasers an ideal component of innovative laser systems and as well an attractive alternative to conventional Nd:YAG lasers.
